## 1.0 Summary

Tests have been done in SRL's Laboratory at Holbrook House, Sudbury, Suffolk, to determine the element normalised level difference of various ventilators in accordance with BS EN 20140-10:1992, ISO 140-10:1991

From these measurements the required results have been derived and are presented in both tabular and graphic form in Data Sheets 1 to 38.

The results are given in 1/3rd octave bands over the frequency range 100Hz to 10kHz, which is beyond that required by the test standard.
